-  User Acceptance Testing (UAT)

Business Process Audit

-  Business Process & Workflow Mapping
-  Risk Assessment and Mitigation
-  Process Automation Assessment
-  Performance Metrics and KPIs
-  Change Management and Process Improvement

Success story **Revitalizing Fintech Excellence: Transforming Outdated Framework**

Challenge

A fintech business faces serious risks due to an outdated and limited platform framework. The framework is at its end-of-life, causing frequent performance problems with all users on a single production instance. The database is burdened with technical debt, requiring an urgent overhaul to separate business logic from the data layer.

Solution

After deep dive in understanding the existing platform and the business challenges, we have designed a structured and actionable blueprint for the entire revamping process. Deliverables consist of:

- High-Level functional and non-functional specification
- Low level functional and non-functional specification
- High-Level Architectural design
- Functional automated test suite
- Work breakdown structure
- Holistic planning document
- Infrastructure migration plan

Outcome

At the culmination of our consultancy, the client was armed with **a detailed roadmap together with the cost and benefits of addressing the technical challenges**. This initiative sought to steer not only to their immediate challenge but also fortify their systems to position them for future scalability, operational efficiency and success in an increasingly competitive landscape.
